100+ feature ideas (suggestions from the previous assistant; NOT verified market research)

Format: number. idea. Pick with the owner; effort/risk are decided when a feature is chosen. Existing ones are marked (exists).

Structure and projects

1. Organization switcher
2. Project templates (software, research, course, trip)
3. Master file auto-index of phases
4. Phase progress bars from step checkboxes
5. Step dependencies (blocked by)
6. Decision log with options/choice/reason
7. Superseded decisions chain
8. Milestones with due dates
9. Calendar (ICS) feed
10. Kanban view of steps
11. Timeline/Gantt view
12. Roadmap view across projects
13. Cross-project search
14. Project archive/restore
15. Project duplicate as template
16. Project-level glossary
17. Per-project theme/accent/logo
18. Per-project retention days
19. Per-project AI policy
20. Per-project public reader URL
21. Project dashboard (open steps, waiting AI edits, stale pages)
22. Pinned documents
23. Favourites
24. Recent documents list
25. Breadcrumbs everywhere

Editing

26. Block editor with slash menu
27. Markdown source toggle
28. Autosave drafts per document
29. Conflict-safe save with 3-way merge
30. Drag-and-drop reorder of sections/chapters
31. Move document between phases/projects
32. Duplicate document

33. Split/merge documents
34. Internal links [[kind:slug]] with autocomplete
35. Backlinks panel
36. Table editor
37. Checklist blocks
38. Callout/warning blocks
39. Code blocks with copy and language
40. Image paste/upload
41. File attachments
42. Math blocks
43. Mermaid diagrams
44. Comments on a passage
45. Suggestion mode for human collaborators
46. Revision compare any two versions
47. Restore single paragraph from history
48. Word/character count and reading time
49. Spell-check (English)
50. (dropped: English only)

AI space

51. Edit-this-passage button that creates a self-accepted draft
52. Rebase stale AI edits automatically
53. Ask the AI to redo a rejected edit with the reason
54. Batch accept by risk threshold rule
55. Auto-accept rules for tiny typo fixes (owner-defined, off by default)
56. Per-token tool allow-list
57. Per-token document allow-list UI
58. Token templates (Reader, Typo fixer, Writer)
59. AI change heat-map per chapter
60. Why-this-changed summary per change set
61. Compare AI edit with the source of its claim
62. Prompt-injection scanner v2 (patterns + model check)
63. Provenance labels on every AI-written passage
64. Review SLA reminders
65. Daily digest email of waiting edits
66. Web push for new proposals
67. Dry-run mode: AI proposes, nothing stored
68. AI usage/cost dashboard
69. Model/client allow-list per token
70. Edit-size budget per token per day
71. Two-person approval for high-risk edits
72. Quarantine zone for unknown clients
73. Replay a past AI session from the audit log

74. Export audit log CSV
75. Signed audit entries (hash chain)

Security

76. Token prefix + checksum for secret scanning
77. Rotate token with overlap
78. Path-token kind with 7-day cap
79. One-tap 24 h Gemini token
80. New-client alert
81. Auto-pause on spike
82. IP/country allow-list for tokens
83. MFA (TOTP) for the owner
84. Passkeys
85. Session list and sign-out everywhere
86. Leaked-password protection
87. RLS test matrix in CI
88. Dependency audit in CI
89. Secret scanning in CI (gitleaks)
90. Content Security Policy headers on Vercel
91. Subresource integrity for CDN assets
92. Backup encryption
93. Data export on request (GDPR style)
94. Account deletion flow
95. Security.txt and disclosure policy

Reader and search

96. Semantic search (pgvector)
97. Search filters by project/kind/status
98. Saved searches
99. Highlight search terms in pages
100. Table of contents sticky rail (exists) with progress
101. Reading position memory per document
102. Changed-since-I-read markers
103. Print/PDF export per project
104. EPUB export
105. Offline mode (service worker cache)
106. Install as app (PWA)
107. Keyboard shortcut cheat sheet
108. Command palette actions for every feature
109. Dark/light/auto theme
110. Font and spacing controls (exist) per project
111. Focus mode

112. Split view of two documents
113. Reading list queue
114. Bookmarks on passages
115. Share a read-only link to one document

Operations and quality

116. GitHub Actions CI (build, tsc, all suites)
117. Preview deploys per pull request
118. Edge Function deploy from CI
119. Nightly backup to a private repo
120. Uptime check of the MCP address
121. Error reporting (Sentry-like, self-hosted or free tier)
122. Web vitals tracking
123. Database size/usage page
124. Slow query log page
125. Migration runner with dry-run
126. Seed/reset for a demo project
127. Fixture-based visual regression screenshots
128. Accessibility CI (axe) on every view
129. Lighthouse budget in CI
130. Changelog page generated from commits
131. In-app 'What is new' dialog
132. Feature flags table
133. Admin 'health' page (all checks in one place)
134. Cost guard for AI calls
135. Docs linter: broken links, orphan pages, duplicate titles, number contradictions

Integrations

136. GitHub issue/PR links on steps
137. Push Markdown export to a repo
138. Link preview cards
139. Slack/Discord webhook for decisions
140. Zapier/Make webhook
141. Import from Notion export
142. Import from Obsidian vault (zip)
143. Import from Google Docs (.docx via mammoth)
144. Export to Obsidian vault
145. Browser extension: clip a page into a project
146. Share-sheet target on phone
147. Email-to-document inbox
148. Voice note to draft step (speech-to-text)
149. Calendar integration

150. Zotero/BibTeX references
151. OpenAPI/JSON schema viewer pages
152. llms.txt and AGENTS.md per project (llms.txt exists)
153. MCP resources/prompts for each project
154. MCP server for the owner's own notes
155. CLI to push/pull docs (docforge sync)

Total: 155
